SUMMARY

Frontend-focused Software Engineer with 1.5+ years of experience building scalable and user-centric web applications using React, TypeScript, and modern JavaScript ecosystems. Proven ability to develop clean component architectures, optimize performance, and manage real-world data flows for maintainable and production-ready systems. Recently expanded into backend development with Node.js, Express, and REST APIs, with a strong interest in building intuitive user experiences and scalable end-to-end applications.

SKILLS

Programming Languages: Javascript, Typescript

Front-End: HTML, CSS, TailwindCSS, ReactJs, NextJs, VueJs

Databases: MongoDB, MySQL

Backend: Express.js, Node.js, Socket.io, REST APIs

Library: Zustand, Redux, Context API, Framer-motion, GSAP, WebSocket

DevOps & Build Tools: Docker, CI/CD pipelines, Webpack, Babel, npm, Vite

Version Controlling & Others: Git, Github, Trello, Jira, Agile/Scrum

Tools: Figma, Postman, Vercel

Testing: Jest, Cypress

PROFESSIONAL EXPERIENCES

Junior Frontend Developer, Visionary Tech Solution

Nov 2024 - April 2026

- Contributed to the development and delivery of scalable, production-grade software solutions across diverse client projects in a fast-growing technology firm.
- Collaborated with cross-functional teams to design and implement intuitive, user-focused applications aligned with client business goals and requirements.
- Worked on building efficient and maintainable systems with a strong focus on performance, scalability, and long-term product sustainability.
- Participated in end-to-end development processes, contributing across frontend and backend systems within a collaborative and innovation-driven engineering team.

Frontend Developer (INTERN), GrapView

Aug 2024 - Oct 2024

- Developed and maintained responsive user interfaces using React and modern JavaScript, focusing on clean design and usability.
- Collaborated with developers and designers to translate UI/UX requirements into functional, production-ready frontend components.
- Improved application performance and code quality by refactoring components and following reusable, scalable architecture patterns.

PROJECTS

Barrister Arman

- Admin dashboard application built to efficiently manage and process over 500,000 voter records at scale.
- Provides fast data access with optimized pagination and search for smooth performance on large datasets.
- Built with React and Redux Toolkit, integrated with REST APIs for scalable state management and full CRUD operations.
- Includes a multilingual (3-language) interface and performance optimizations that reduced load time by ~30%.

Vidlist.ai

- AI-powered platform that converts image collections into short-form videos and slideshows for real estate and sales professionals.
- Enables users to create content through a no-code workflow, generating videos and slideshows in under 30 seconds.
- Built with a Next.js frontend, supporting media uploads, form handling, and API integration for AI-based generation.
- Uses React Hook Form, Axios, Framer Motion, and React Slick to deliver smooth interactions, reusable components, and preview animations.

RiseAtSEven

- Built an interactive featured-works section inspired by modern agency sites using GSAP and ScrollTrigger.
- Implemented synchronized scroll-based animations with pinned layouts, active-state tracking, and smooth image transitions.
- Engineered performance-optimized UI interactions including hover effects, custom cursor behavior, and responsive scroll handling.

EDUCATION

Daffodil International University

May 2019 - July 2024

B.Sc in Software Engineering

CGPA: 3.1 out of 4.00
